DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 9, 2006 has been entered.

Response to Amendments

2. Amendments to claims 6 have been entered in the above-identified application. **Claims 1-9 are pending of which 6-9 are under consideration.**

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Snow (US 4,363,841).

Snow discloses a laminated packaging material comprising an outermost layer of polyester or polypropylene (***corresponding to the thermoformable base layer of the claimed invention***), a metallic foil layer of aluminum (***corresponding to the barrier layer of the claimed invention***) and an innermost layer of a heat sealable polyolefin such as LLDPE (***corresponding to the laminate layer of the claimed invention***) (Column 2, lines 12-55). Once the laminate material is formed, the containers may be folded and heat sealed (Column 3, lines 12-32).

Snow does not teach that the polypropylene base layer is filled.

However, it would have been obvious to add filler to any of the polymeric layers in the laminate taught by Snow given that the addition of filler decrease the cost of the laminate by decreasing the amount of the polymer. With regards to the process limitations of claim 8, the Examiner would like to remind the Applicants that the determination of patentability for product claims containing process limitations is based on the product itself and not on the method of production. If the product is the same or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. *In re Thorpe*, 227 USPQ 964, 966 (Fed. Cir. 1985) and also see MPEP 2113. In this case, the product (i.e., the laminate) is the same despite the process limitations of heat-treating with moist heat at a pressure greater than atmospheric pressure. All limitations of the claimed invention are disclosed in the above reference.

Response to Arguments

4. Applicant's arguments filed on November 9, 2006 have been fully considered but they are not persuasive. Applicants traverse the rejection of claims 6-9 under 35 U.S.C. 103(a) as being unpatentable over Snow (US 4,363,841) and submit that the purpose of the addition of the filler according to the present invention is to enhance rigidity of the polyester layer and not to reduce cost. In response the Examiner would like to point out that the fact that applicant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious. See *Ex parte Obiaya*, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985).

Hence, the above rejection is maintained.
